## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-7, 10-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Bower et al (5626009).

Prior art discloses:

In re cl. 1:

An elongated handle (3), centerline, proximal & distal ends (fig 1, ref 3);

A means for cultivating, a means for grooming as claimed (col. 1, ln 14-47);

the means for grooming is a rake assembly including tines with a base end a center & a tip end diverging outwardly & fixed in position with respect to each other (see fig 2, ref 7), and a hook (see fig 1, at ref 7);

extended & retracted positions as shown in fig 2 & 3;

the rake is slidably mounted capable of being retracted or extended (as disclosed col. 3, ln 3-5);

In re cl. 2:

the means for cultivating: a metal blade, generally U-shaped, a first & second cutting edges (fig 1, ref 5; col. 3, ln 6);

in re cl. 3:

the blade includes: two upright portions, a bottom portion (fig 1, ref 5); a ferrule portion (at ref 4 or 10);

in re cl. 4:

the handle includes a ferrule & at least two bosses (at ref 4; one is shown however same boss is on the other side), the upright portions of the blade including at least one aperture (see fig 1, at ref 5 upper portion);

in re cl. 5:

the ferrule includes at least one stop pin and cooperates with at least one elongated slot formed in the upright portions of the blade allowing slight pivot (col. 3, ln 6-12; the elongated slot is through at the head of bolt ref 6 or fig. 1, while the pin is shown in fig 2, bolt ref 6);

in re cl. 6:

the blade: the bottom portion is "about" flat (see fig 1 or 2);

in re cl. 7:

the blade: oriented at an obtuse angle (fig 1);

in re cl. 10-11:

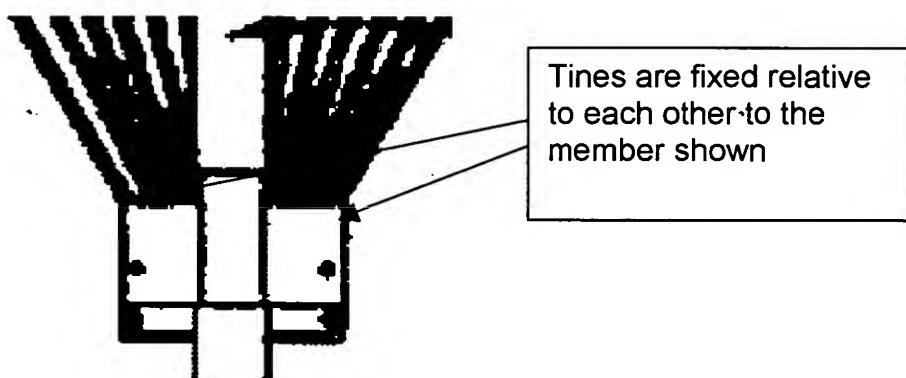

a key & key slot or means for preventing rotation of the rake assembly (see fig 1).

***Response to Arguments***

3. Applicant's arguments filed 8/22/2005 have been fully considered but they are not persuasive.

4. Applicant's amendment as argued "rake tines are fixed with respect to each other" etc... is not met by the prior art is not agreed with, since as shown in the fig.

Below the tines are fixed with respect to each other:

While Applicant's argument not germane in view of the specific claim language recited, the Examiner would point out that Applicant's invention <sup>also</sup> collapses tines as shown in fig. 3.
